controlling inflation? To adjust interest rates and conduct open market operations to influence money supply and demand. In the context of aggregate demand and supply, a decrease in aggregate supply results in: Higher price levels (inflation) and lower output (stagflation). Which factor is most likely to cause a rightward shift of the long-run aggregate supply curve? An increase in the economy's capital stock or technological progress. The concept of 'Ricardian Equivalence' suggests that: Consumers anticipate future taxes when government debt increases, and thus, they reduce their current consumption accordingly.
