Sample Forklift Test Questions and Their Answers

To illustrate the typical content, below are some common questions with detailed explanations.

1. True or False: It is acceptable to operate a forklift if you are feeling tired or unwell.

Answer: False. Operating a forklift requires full alertness and focus. Being tired or unwell impairs judgment and reaction time, increasing the risk of accidents.

2. What is the primary purpose of carrying loads close to the ground?

Answer: Carrying loads at a low height lowers the center of gravity, enhancing stability and reducing the risk of tipping over. It also prevents load falling onto the operator or others in the vicinity.

3. Which of the following is a safe practice when stacking loads?

- A) Overstack beyond the forklift's maximum height
- B) Ensure loads are evenly distributed and stable
- C) Tilt the mast backward excessively to secure the load
- D) Travel with the load raised to the maximum height

Answer: B) Ensure loads are evenly distributed and stable. Overstacking and excessive tilting compromise safety, and traveling with loads raised increases risk of tipping.

4. When conducting pre-operation checks, which of the following should be inspected? (Select all that apply)

- A) Hydraulic fluid levels
- B) Tire condition and pressure
- C) Warning devices and lights
- D) Operator's personal attire

Answer: A), B), and C). Pre-operation inspections focus on equipment condition and safety features. While personal attire is important, it is not checked during a forklift inspection.
