Chapter 25 of Palgrave Macmillan emphasizes the importance of these markets, their structure, and their function within an increasingly interconnected global financial system.

What Are Financial Markets?

At their core, financial markets are platforms or systems where buyers and sellers trade financial assets such as stocks, bonds, currencies, derivatives, and commodities. The primary goal is to facilitate the raising of capital, transfer of risk, and price discovery.

Types of Financial Markets

Financial markets are broadly classified into two categories:

- Primary Markets: Where new securities are issued and sold for the first time. This is where companies raise capital through initial public offerings (IPOs) or bond issuance.

Further classifications include:

- Capital Markets: Long-term funding instruments like stocks and bonds.
- Money Markets: Short-term debt instruments like treasury bills, commercial paper.
- Foreign Exchange Markets: Trading of currencies.
- Derivatives Markets: Trading in options, futures, swaps designed for hedging or speculation.

The Evolution of Financial Markets
